Re: WC Docket Nos. 26-133, 13-184, 21-93, and 21-455 — Notice of Proposed Rulemaking and Further Notice of Proposed Rulemaking Concerning E-Rate
Ensuring Children's Safe Use of Screens and E-Rate-Funded Services, WC Docket No. 26-133
Modernizing the E-Rate Program for Schools and Libraries, WC Docket No. 13-184
Establishing the Emergency Connectivity Fund to Close the Homework Gap, WC Docket No. 21-93
Promoting Fair and Open Competitive Bidding in the E-Rate Program, WC Docket No. 21-455

Dear Chairman Carr:

The Pennsylvania Digital Trust Hub is a statewide collaborative led by the Allegheny Intermediate Unit that helps Pennsylvania schools protect student data, vet technology, strengthen cybersecurity, and speak with one voice on policy. In July 2026 the Hub opened a public, data-driven resource at erate.padigitaltrusthub.net showing what E-Rate has delivered in every region of the Commonwealth, drawn entirely from USAC's open data, and invited Pennsylvania's school and library leaders to sign on to a statement in support of the program.

The Hub submits this comment and transmits with it the Pennsylvania statement in support of E-Rate and the names of the 420 individuals who had signed it as of October 12, 2026. They are school, library, and intermediate unit leaders, educators, school board members, and community members from 291 organizations, including 222 of Pennsylvania's 499 public school districts and signers from all 29 intermediate unit regions, along with career and technical centers, charter schools, non-public schools, and libraries.

Each signer agreed, as a condition of signing, that the AIU may include their name and organization in advocacy communications, including letters and testimony. An organization is listed to identify a signer's affiliation and does not by itself constitute an institutional endorsement. Their names, titles, and organizations are listed in Appendix A. One hundred eighty-three attached written statements; several are quoted below, each in the signer's own words.

The Pennsylvania Digital Trust Hub and the signers urge the Federal Communications Commission (FCC) to preserve and strengthen the E-Rate program and to reject any proposal that would eliminate, sunset, substantially reduce, or unnecessarily restrict E-Rate support for schools and libraries.

They see firsthand that reliable, high-quality broadband is no longer an optional technology benefit for students. It is essential infrastructure for modern public education and supports myriad operational and instructional functions in their schools. Since funding year 2016, E-Rate has committed more than $672 million to Pennsylvania schools and libraries in all 67 counties.

Connectivity underpins every aspect of the school day

Before a student even enters a classroom, E-Rate helps provide the network infrastructure that allows a school district to function. When that connectivity is unavailable or unreliable, it disrupts the basic operations of the school and compromises the district's ability to safely and effectively serve students.

Christopher Bolin, Director of Technology and Innovation for the Bethel Park School District, after 23 years in K-12 technology: "E-Rate is not funding luxuries - it is helping schools afford the essential infrastructure that keeps classrooms connected, protects our networks, supports online learning, enables state testing, and powers nearly every aspect of modern education."

Karen Cornell, Chief Information Officer for the Diocese of Greensburg: "Students, parents, teachers and school leadership rely on this connectivity hour to hour and day to day."

Students and educators rely on it every day

E-Rate is the federal program dedicated to school and library connectivity, and the connectivity it provides is foundational to student learning.

Christine Wolgemuth, Director of Technology for the Chambersburg Area School District, described what now depends on it: "modern educational mandates, ranging from the delivery of Flexible Instructional Days and online learning to mandatory electronic reporting through systems like PIMS depend entirely on reliable digital infrastructure. Without E-rate, these requirements effectively become unfunded burdens".

Gary Weber, Superintendent of the Warren County School District, wrote on behalf of his board: “Our students attend schools in a rural region of Pennsylvania, but they are expected to learn, compete, communicate, and ultimately enter a workforce that is increasingly dependent upon technology. They should have access to infrastructure capable of supporting those expectations.”

What losing E-Rate would cost

The FCC’s proposal points to the progress schools have made in expanding broadband connectivity over the past three decades. But the fact that schools are connected today is, in large part, evidence of the success of E-Rate, not evidence that the need for the program has disappeared. Connectivity must be maintained, upgraded, secured, and scaled as instructional demands and technology continue to evolve. The signers put numbers on it.

John Kreider, Superintendent of the Carlynton School District: “For our current recurring fiber and internet costs alone, E-Rate supports $41,744.58 of our $48,016.80 annual cost. Without that support, those costs would shift directly to the local budget.”

Brian Paulhamus, Director of Technology at the Central Susquehanna Intermediate Unit: “Losing E-Rate would shift more than $1 million per year in broadband and network infrastructure costs onto our member districts”.

Christopher Pace, Information Technology Specialist for the Fort LeBoeuf School District, describing a near-million-dollar campus rebuild of cabling, wireless, and switching first installed in the early 1990s: “Without the financial support of the E-Rate program, our district simply does not have the capital or the local tax base to absorb a project of this magnitude.”

Robert Presley, Superintendent of the Jim Thorpe Area School District: “Being a rural school with a budget deficit of $2,500,000 for the 26/27 school year, the E-Rate program is a vital source of funding that we use to upgrade our networks.”

Those costs would ultimately compete with the resources districts use to support students and educators. School districts operate within finite budgets. When the cost of essential infrastructure increases, districts are forced to make difficult choices about staffing, instructional programs, student services, transportation, facilities, and other priorities.

Kendra Pritchett, Superintendent of the Northern Bedford County School District: “Reality is if it goes away, that means less for our students because we are going to have to provide for this need by taking away something else.”

Connectivity is not screen time

School connectivity is not synonymous with unrestricted student screen time. Districts, educators, and families already make decisions about when and how technology should be used to support learning, and those decisions rest squarely in the domain of state and local control. Pennsylvania has no statewide screen-time mandate; its districts set their own policies, and they differ because communities differ. The signers would also distinguish screen time from instructional technology. A student conducting research, collaborating with classmates, or using an accessibility tool is engaged in something fundamentally different from passive consumption.

Chuck Robinson, Director of Information Technology for the Duquesne City School District: "These tools do not replace in-person instruction; rather, they serve as a valuable supplement to classroom teaching".

Whether technology is being used well is a question that we *should* ask, and it belongs to educators, families, school boards, and states. E-Rate, as a federal infrastructure program should not be put in the position of regulating instructional decisions.

Need does not stop at the rural line

The Commission should also consider the needs of districts that serve diverse communities. Broadband needs do not disappear simply because a school district is located in an area where broadband is technically available. Schools must continually invest in the capacity, reliability, internal connections, Wi-Fi, maintenance, and other infrastructure necessary to deliver meaningful connectivity throughout school buildings.

Aaron Smith, Technology Director for the Keystone Oaks School District in suburban Pittsburgh: "Keystone Oaks currently qualifies for an 80 percent E-Rate discount based on student economic need. This assistance allows our district to maintain secure, high-capacity connectivity while directing limited local resources toward classroom instruction and other student needs."

Jennifer Kassimer, Director of Technology and Innovation for the West Jefferson Hills School District: "E-Rate funding is critical to our suburban school district because we rely heavily on local property tax revenue while facing rising technology costs and limited opportunities to generate additional funding."

Raymond Berrott, Director of Technology for the Upper St. Clair School District and chair of Allegheny Connect, the Allegheny County regional network consortium: "In Upper St. Clair, E-Rate supports our Internet access, local wide area network, and our connection to the regional wide area network that serves schools across Allegheny County. This shared connection helps districts provide affordable and dependable Internet access while using public funds responsibly."

Erica Guadalupe, Director of Secondary Curriculum and Online Learning for the McKeesport Area School District: “Because 100% of our students qualify for free and reduced-price meals, the program’s 90% discount makes reliable internet access and network infrastructure financially possible for our district.” (The 90 percent rate applies to Category One services such as internet access; Category Two internal connections are discounted at up to 85 percent.)

A well-governed program that has kept adapting

Shawn Stoebener, Director of Technology for the Pine-Richland School District, on what the program asks of its participants: E-Rate “instills fiscal discipline by requiring school districts to engage in regular, transparent competitive bidding”, and it “establishes a predictable rhythm for hardware refreshes, ensuring essential networking infrastructure is systematically modernized rather than endlessly deferred under tight local budgets.” E-Rate has adapted alongside the technology schools depend on, and the Commission’s cybersecurity pilot recognized one of the most urgent examples of continuing need. That responsiveness is a strength of the program, not a reason to declare its mission complete.

E-Rate’s success over the past three decades should be viewed as a reason to preserve and improve the program, not as a reason to assume that the work is finished. From the perspective of the 420 Pennsylvanians who signed this statement, reliable broadband is part of the basic infrastructure of a modern school system, just like electricity, transportation, and safe facilities. For nearly thirty years, E-Rate has helped schools solve connectivity challenges together. The challenges are changing. The need for E-Rate is not.

We therefore respectfully urge the Commission to:

1. Reject any proposal to sunset or eliminate the E-Rate program;
2. Reject proposals that would unnecessarily narrow E-Rate eligibility or restrict support based solely on geography or other criteria that would leave students without adequate support;
3. Preserve support for the connectivity and internal network infrastructure schools need to provide reliable educational access; and
4. Work with schools and other stakeholders to strengthen and modernize E-Rate rather than reduce its role in public education.

E-Rate has enabled schools, public and private, and libraries to build and maintain the connectivity necessary for students and patrons to participate fully in modern education. As our nation seeks to prepare students for college, careers, and an increasingly technology-driven

economy, now is not the time to undermine the very program and related infrastructure that makes those opportunities possible.

Our students deserve access to the tools they need to learn and succeed regardless of where they live or their family's financial circumstances. We urge the Commission to protect E-Rate and ensure that schools can continue providing students with reliable, affordable, and effective connectivity.

Thank you for considering these comments.

Respectfully submitted,

Richard Platts
Chief Technology Officer, Allegheny Intermediate Unit
Pennsylvania Digital Trust Hub

Dr. Robert Scherrer
Executive Director
Allegheny Intermediate Unit
475 East Waterfront Drive
Homestead, PA 15120

Sources and methodology

Statewide figure: USAC E-Rate open data (FRN Status dataset), funded FRNs on the current form version, committed amounts, funding years 2016–2026, extracted July 2026; published with methodology at erate.padigitaltrusthub.net and erate.padigitaltrusthub.net/usac-data-guide.html.

Sign-on figures: records from the Hub's sign-on form, exported October 12, 2026, with duplicate submissions removed; district count by matching signer organizations to the Commonwealth's 499 public school districts; intermediate unit regions by organization or ZIP code.

Discount matrix: 47 C.F.R. § 54.505 (Category One and Category Two discounts by National School Lunch Program eligibility, with a rural adjustment).

Quotations: written statements submitted with the Pennsylvania sign-on statement in support of E-Rate at erate.padigitaltrusthub.net, exported October 12, 2026; each quoted signer agreed that their name and organization may be used in advocacy communications.

Appendix A: Signers of the Pennsylvania statement in support of E-Rate (420 individuals as of October 12, 2026)
